Technical Skills:

Java | Javascript | jQuery | Bootstrap | HTML | CSS | SQL | MongoDB | MySQL | React.js | Express.js

University of Arizona Coding Bootcamp **Student** **June 2018 – September 2018**

Project Name: [Hearthstone Deck Creator](#) | Backend Developer | [GitHub](#)

Project Description: The goal of this project was to take in data for the game Hearthstone and create a “deck builder” for players to easily visualize the cards before purchasing the cards. The biggest issue was dealing with over 4000 nested arrays of all the card data. The API to retrieve the data was built by a 3rd party since “Blizzard” didn’t create one, so the file structure was broken in many areas. Manipulating the data became the ultimate task in this project, but was a great learning experience.

**Technologies/
Frameworks Used:** JavaScript | jQuery | AJAX | Firebase | Bootstrap | CSS

Project Name: NAME OF PROJECT (Hyperlinked) | Role

Project Description: PAINT THE PICTURE OF YOUR PROJECT FOR THE EMPLOYER.
What did it do? What problems did it solve? What was its purpose? This is your moment to entice the employer to want to click your link.

**Technologies/
Frameworks Used:** ADD TECHNOLOGIES AND FRAMEWORKS USED HERE
